Capping Method

- ◆ Servo Screw Capping
- ◆ Plug Capping - PP Capping
- ◆ Pump Caps with Stems
- ◆ Special/Multiple Caps
- ◆ PLC Control (Allen-Bradley)

The compact filling and capping machine gives new meaning to versatility. With its modular design, the system can be customized to fill a large variety of products into a wide range of containers - both plastic and glass - and apply many different caps/closures.

Reliable, efficient and simple to operate, the SHC Compact Filler/Capper is designed for easy changeover. Various product parameters can be pre-programmed into the touch screen controller.

Design the system that meets your needs! Configure it with an air cleaner, bead inserter, or set it up to handle pucks. Use two filling systems in tandem with CIP capability for quick product changes. Equip the filler/capper with two capping stations for a variety of closures, like screw caps, pump caps with stems, PP caps, snap and plug caps. Add an automatic detect/reject system. And for safety, an enclosure with interlocks is standard!

The options are virtually endless. It is the system that grows with you, adapting to your changing needs with performance you can trust.

Compact Filler-Capper

Bottle Diameters	1 1/8" - 4 1/4" (30 - 110mm)
Bottle Heights	2" - 15 3/4" (50 - 400mm)
